  - Lodash, jQuery, Webpack, AJAX
- Other
  - JSON, XML, Git (Srouce Control System), OOP Consepts

Experience (personal projects)

- Issue/Bug Tracker Project (click to view deployed) Full-Stack SPA Web Application.
  - **Backend**: RESTful API. Spring Boot (Swagger UI Documentation). Deployed on Heroku. Uses PostgreSQL as a database, Spring Scurity (with JWT) and Hibrnate ORM.
  - **Frontend:** React App written in TypeScript with Ant Design. Deployed on Netlify
  - Simmulates an Issue/Bug Tracker. Supports different authorities (Admin, Project Manager, Developer QA).Gives the ability to create projects, submit tickets to this projects, reslove the tickets, comment on the tickets. Gives Project Managers the ability to assign QA to projects, so they can submit tickets and the ability of Developers to resolve the tickets
- Online Movie Database Project (click to view deployed) Full-Stack SPA Web Application. Uses 2 APIs.
  - **Backend:** GraphQL API. Spring Boot GraphQL (Playground) - written by me, deployed on Heroku. Uses PostgreSQL as a database, Spring Scurity (with JWT) and Hibrnate ORM. And TMDB API (REST) – Public(free) API.
  - **Frontend:** React App written in TypeScript with Material-UI. Deployed on Netlify
  - Gives the users the ability to browse movies, tv-shows, actors, comment on each and every one of them, and add them or remove them from favorites.
  - My API supports different authorities with different priviligies. Paid Account, Free Account, Admin. Handles the adding and removing of favorites, posting, editing, deleting, fetching comments
- Portfolio App (click to view deployed) SPA Web Application
  - My personal online resume. Best way to learn more about me. It's a React App written in TypeScript.
